Education

University of Technology Sydney July 2023 – June 2027
Bachelor of Information Technology (Honours) in Data Analytics & Cybersecurity *Sydney, Australia*

- GPA: 3.62 / 4
- Relevant Coursework: Machine Learning, Data Visualization and Analytics, Database Fundamentals, Cloud Computing, Image Processing and Pattern Recognition
- Organization: Programmer Society, AIESEC, PC Society, Cybersec Society, The Big Lift, Puzzle Society
- Awards: UTS Dean's List, UTS Academic Excellence Scholarship, Finalist for Hong Kong Supply Chain International Datathon, Finalist for Deloitte Case Competition 2026

Experience

Technical Associate Jan 2025 – Present
UTS PC Society *Sydney, Australia*

- Organized and delivered a Linux server course teaching 40+ members server management, command-line fundamentals, and container deployment with Docker.
- Developed a React web application for banning maps used in a $5000 Valorant Championship.
- Resolved hardware and software faults under time pressure during live technical events

Team Manager Feb 2024 – July 2024
AIESEC *Sydney, Australia*

- Oversaw and led a team of 4, providing senior leadership with weekly performance reports, lead analyses, and KPI tracking using Excel.
- Organised a cross-cultural event with AIESEC India, Indonesia, Cambodia, Vietnam and Nepal for 30+ attendees
- Managed and contacted 50+ potential volunteers for global opportunities.

Projects

Large Light Novels | *Python, RAG, Chroma DB*

- Built a Large Language Model (LLM) powered translator for context heavy light novels using OpenAI API.
- Increased translation accuracy by building a RAG to retrieve key events, characters, and plot from previous translations in a vector database.
- Developed a Gradio interface to showcase the translator in a user-friendly interface.

Tariff Impact Analysis | *Python, Power BI, SQL, Jupyter Notebook, Excel*

- Analysed over 6 months of import/export cargo records from Hong Kong International Airport to evaluate the impact of US tariff policy changes using Python and PowerBI.
- Oversaw a team of 3 members in analysing US tariff policy changes and their effect on cargo volumes at Hong Kong International Airport, identifying correlations between tariff reductions and increased import activity.

Storygen | *Python, LangChain, React, PostgreSQL*

- Built a FastAPI story-generation backend using LangChain and ChatGPT to turn prompted themes into structured stories with multiple endings
- Implemented a 4-state story-generation job pipeline and 3 REST endpoints for creating stories, tracking job status, and retrieving completed story trees.

Technical Skills

Certifications: AZ-900 Azure Fundamentals
Languages: C/C++, Python, Java, TypeScript, JavaScript, HTML/CSS
Data: Power BI, Excel, Tableau, SQL (Postgres), Databricks, Kafka, Airflow, dbt
Frameworks & Libraries: React, Node.js, Flask, FastAPI, PyTorch, Sci-kit Learn, pandas, NumPy, Matplotlib
Infrastructure Tools: Git, Docker, AWS, Azure, GCP, Kubernetes, REST
